

Obstetric Medicine Rotation Goals and Objectives

"Taking care of women with medical complications in pregnancy"

McMaster University Medical Centre

Revised: April 5, 2018

Medical Expert

- Demonstrate an understanding of the physiologic changes that may occur during pregnancy.
- Demonstrate knowledge of management of a variety of medical problems in pregnancy.
 - Hypertension
 - Preeclampsia
 - Renal disorders (including diabetic nephropathy, polycystic kidney disease, nephrotic and nephritic disorders etc.)
 - Liver disorders (including the approach to elevated liver enzymes, cirrhosis, etc.)
 - Common hematologic disorders (including hemoglobinopathies, thrombocytopenia in pregnancy, and thromboembolic disorders etc.).
 - Cardiovascular diseases in pregnancy
 - Endocrine diseases in pregnancy (including diabetes mellitus, gestational diabetes, thyroid disorders etc.)
 - Common neurologic disorders (including the approach to headaches, epilepsy, stroke, etc.)
 - Common autoimmune and rheumatologic disorders (including lupus, rheumatoid arthritis, undifferentiated joint complaints etc.)
- Demonstrate an understanding of management issues for chronic medical issues in pregnancy; in terms of pre-pregnancy counseling, preparation for pregnancy and postpartum follow-up.
- To develop an appreciation for the application of clinical pharmacology in pregnancy, with a focus on the safety of drugs in pregnancy.

Communicator

- Demonstrate the ability to communicate with the multidisciplinary team involved in obstetrical care.
- Communicate and counsel patients appropriately for issues regarding the health of mother and baby.
- Demonstrate the ability to communicate the balance between risk versus benefit in terms of investigations and treatments in pregnant patients.

Collaborator

- Demonstrate the ability to communicate and function well in a multidisciplinary environment involving multiple disciplines (including general medicine, obstetrics, perinatology, anesthesia, critical care, subspecialists, nursing, etc.).
- Demonstrate the ability to be co-manager of patients with obstetricians, understanding the role of medicine as the subspecialty leader for medical issues, but not obstetrical issues.

Obstetric Medicine Rotation Goals and Objectives

"Taking care of women with medical complications in pregnancy"

McMaster University Medical Centre

Manager

- Demonstrate management skills required to function in practice requiring a mixture of outpatient and inpatient assessments while utilizing effective time management skills.

Health Advocate

- Demonstrate advocacy for health promotion and preventive strategies.
- Demonstrate the ability to effectively counsel patients on risks and benefits of health interventions in the perinatal setting.
- Demonstrate the importance of advocating for health interventions with other healthcare professionals.

Scholar

- Identify areas of deficiency for continuing education.
- Identify strategies for continuing education including utilization of information technology to address relevant clinical questions or review clinical evidence.
- Identify areas for potential research interests.

Professional

- Demonstrate a high level of personal integrity along with high levels of clinical competence.
- Demonstrate a commitment to professional behaviour.
